...PageMaker technologies are mentioned in a discussion of on-screen typography. To enhance on-screen **font** legibility, developers can use bit-mapped **fonts**, and ATM provides good looking, well-spaced **letters**. On-screen legibility is influenced by monitors' resolutions, which do not have enough **pixels** to draw 12- **point** or smaller **characters** clearly. In addition, **pixels** are small, which makes **characters** hard to see.

Monitors usually show less than 100 **pixels** per inch, and even with enough **pixels** they are hard to read at screen viewing distance, even on a high quality monitor...

...typeface's size, and PostScript holds to this standard, as do the original Macintosh system **fonts**. TrueType **fonts** are little-used by graphic designers, but TrueType's hinting technology makes it a potentially ...
